To Whom It May Concern:

Regarding unused FCC Tv Channels in 700mhz

As a rural Wireless Internet Provider I could use these channels to greatly benefit the rural community in my area . Currently I have a hard time providing access to many rural customers in my area due to spectrum limitations. My area is majority covered with trees ranging from 60 to 100 ft tall and the 700 mhz spectrum would help tremendously in my quest to provide Broadband to the rural areas. I currently use the 900 mhz wireless broadband system and it does ok but is limited as you know. Opening up the 700 mhz channels would give me and my clients a little hope.

Thanks for your concerns
